Office Action Summary	Application No. 10/727,205	Applicant(s) PFAU, CHRISTIAN	
	Examiner Jermie Cozart	Art Unit 3726	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

1. Applicant's election of Group II, claims 17-19 in the reply filed on January 30, 2006 is acknowledged. It is noted that claim 20 was inadvertently left out of the restriction requirement by the Examiner, therefore claim 20 is now included in Group II since claim 20 depends from elected claim 17, and a comprehensive of claims 17-20 will be performed by the Examiner. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 17-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Freyermuth et al. (US 6,629,480 B1).

Freyermuth discloses an apparatus for fixing at least one tool (12) in a clamping chuck/socket (2), the apparatus has a device (13) for inserting the tool into the clamping chuck, a configuration (4) for determining an actual position of the tool before and/or during an insertion of the tool into the clamping chuck, a positioning device (8) for

Art Unit: 3726

positioning the tool in the clamping chuck utilizing information obtained with regard to the actual position of the tool for setting a desired position of the tool inside the clamping chuck, a heater (5) which is capable of heating the clamping chuck for receiving the tool, a position monitoring system (9, 10) for non-contact determination or checking of at least one of the actual position, the desired position, and a reference position on the clamping chuck, wherein the desired position of the tool is defined relative to the reference position, a device (i.e. robotized arm, col. 2, line 48) which is capable of rotating at least one of the clamping chuck and the tool about a common rotational axis. See column 1, line 66 – column 2, line 65, and figures 1-2 for further clarification.

Note that “for heating the clamping chuck for receiving the tool”, and “for rotating at least one of the clamping chuck and the tool about a common rotational axis” are recitations of the in the intended and that a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references cited on the attached PTO-892 are cited to show the assembly of tools into chucks/sockets.
